APP Pharmaceuticals

APP Pharmaceuticals, Inc., a company of the Fresenius Kabi Group, is a fully-integrated pharmaceutical company that develops, manufactures and markets injectable pharmaceutical products. Our primary focus is centered on the anesthetic/analgesic, anti-infective, critical care and oncology markets. Our products are used in hospitals, long-term care facilities, alternate care sites and clinics throughout North America, and are manufactured in a comprehensive range of dosage formulations. APP Pharmaceuticals provides ongoing affordable healthcare to millions of people in North America struggling with critical and chronic illnesses.

News and Headlines

Product Search Options:

There are three ways to search products from the APP home page: by Name or Product Number, and by Product Family footnote, or by both

The "Search Products" field is a text field that allows the user to type in the name of a drug or a product number. After entering text, the user must click the Go button to begin the search.

The "Search Product By" is a pull-down that uses the main Product Family Footnotes (in the Product Editor) to find and display products. After making a selection on the pulldown menu, the user must click the Go button to begin the search.

If the user enters text in the Products field, and selects a Footnote from the pulldown, the search will only return those products that meet that Footnote requirement.

Header Search:

The Search box at the top of the page should allow the user to either search the web site text, or the Product Database. Clicking on one of the radio buttons will determine which database is searched. The default setting will be the "site" radio button. Clicking on the Search button will begin the search and return the appropriate Search Results page.

Bleomycin for Injection, USP	New-63323-136-10	103610	15 Units

When the user searches for a Product by Name or Family Footnote from the Home Page, this is the search results page that will appear. This search will return lists of products displaying specific product codes that match the search selection. The results of the search will be displayed in alphabetical order, with the graphic treatment from the Alpha List page. The search results will be by Product Code in red text, with NDC Number, Product Number and Strength in black text; the red Product Code text links to the appropriate Product Display page. From this page the user can complete another search without having to return to the Home Page.
